### **Elephants and Bees**

by Andrew Kim

Many farmers in Africa have a problem. Elephants get into the farmers' fields and eat the food they grow. The farmers have to find a way to keep the elephants out, so they put fences around their fields. They also try to frighten the animals by starting fires and making loud noises on drums. Often, these solutions do not help. Sadly, some  
5 farmers kill elephants that go into their fields.

Dr. Lucy King, from Oxford University, thinks she has an answer to these problems. She found out that elephants are afraid of bees. She played a recording of bee sounds near a group of elephants and these huge animals ran away. They also made a special sound to warn other elephants.

10 Dr. King hopes her discovery will help the farmers. It could also save many elephants. "Farmers can put beehives" around their fields," she says. "When elephants come near, the noise of the bees will frighten them. They will run away and send a message to other elephants to keep away. Fewer elephants will die and farmers will have more food." It seems that Dr. King's solution can help both the farmers and the animals!
